

# Jacob Sandau

## Education

University of Minnesota, Twin Cities — B.A. Data Science, Minor Computer Science

Expected May 2027

Relevant coursework: Database Systems, Regression & Statistical Computing, Data Structures & Algorithms

## Skills

**Languages & Analysis:** Python, SQL, R, Excel & Power Query, Tableau, Power BI, TypeScript

**Revenue Operations:** HubSpot CRM administration, pipeline architecture & governance, renewal and lifecycle automation, lead scoring, deal hygiene, SOP documentation

**Systems & Automation:** HubSpot–QuickBooks reconciliation, workflow automation, Swoogo event integration, data enrichment, REST APIs, webhooks, UiPath

**AI & Web:** LLM workflow design, prompt engineering, agent debugging, Next.js, Flask, PostgreSQL, Prisma

**Certifications:** HubSpot Revenue Operations, HubSpot Sales Hub Software, UiPath Automation Starter

## Experience

Medical Alley

Golden Valley, Minnesota

**Data Specialist Intern**

May 2026 – Present

Nonprofit medtech trade association. 300+ member accounts on annually renewing dues, retention dynamics comparable to subscription revenue.

- **Consolidated 11 fragmented deal stages into a normalized 7-stage pipeline** spanning three business units, remapped existing deals into the new schema, and rolled it out with manager sign-off, removing stage-mapping drift from pipeline reporting.
- **Reconciled a \$3.1M, 321-deal renewal pipeline** against QuickBooks (finance system of record) with a Power Query matching pipeline, recovering 35+ deals missing from the CRM and resolving 50+ mismatches with accounting.
- **Built a two-agent account-health system in HubSpot** grading renewal risk for 300+ accounts, then halved agent credit usage per run by replacing the second model call with deterministic branch logic on the first agent's output.
- Root-caused intermittent blank agent outputs to the workflow reading *text\_response* when the agent had returned *agentOutput*; moved note generation into the agent's own instructions.
- **Engineered a decay-weighted engagement scoring model** (events, meetings, form fills, page views etc) banded across three membership tiers, paired with AI risk grades in a 4x3 renewal triage matrix and validated against partnership-manager judgment.
- **Improved CRM data quality** across the member base: merged 100+ duplicate companies, audited 400+ accounts for partner-status alignment, and enriched 8,000+ records — surfacing ~30 companies in a region leadership believed held only 12.
- **Own 14 production HubSpot workflows** across renewal creation, lifecycle sync, and event roll-up, plus a Monday report routing each sales rep the open deals missing any of 7 required fields.
- Authored the CRM Data Governance & Standards Guide and an 86-property tagging/completeness inventory; presented CRM architecture and scoring proposals to the CEO, VP of Partnerships, and Accounting.

Mission Outdoor

Eden Prairie, Minnesota

**Warehouse Associate**

Summers 2023, 2024

Picked, packed, and shipped ~300 orders/day against a SKU-based inventory system; trained new hires.

## Projects

### AI Website Audit & Lead Funnel System

Next.js · TypeScript · PostgreSQL · Prisma · Groq (LLaMA 3.3) · Puppeteer · HubSpot API | [live demo](#)

- Full-stack app that scrapes a site, runs LLM analysis with constrained JSON outputs, and returns SEO, UX, conversion, and performance scores in under 60 seconds.
- Email-gated lead flow auto-creates a HubSpot contact and deal with audit context pre-populated.

### Grocery Operations & Demand Forecasting System

Python · Flask · PostgreSQL · GroupMe Bots API · scikit-learn · SQL · Tableau

- Request-intake bot for a 100+ member organization replacing a 30+ min/week manual process, plus a SQL demand forecast surfaced in Tableau dashboards of predicted vs. actual spend.
